Overview

Email is and probably, will remain the central backbone of our communication framework. There is no doubt, growth of Smartphones and Tablets is going to be explosive in coming years, and this will be directly proportional to growth of mobile email.

Today's fast moving, hi-tech world, demands wireless email, from anywhere with one of the most popular mobile devices available. Having the contacts up to date, at our fingertips has become a crucial need.

The problem

As an outlook user you always look forward to work with your Outlook emails anytime, anywhere. If that's the case, definitely desktop alone cannot be helpful.

Want those important outlook contacts even while you're away from your desktop?

Are you tied-up to your desktop just to check your outlook emails?

Is your answer **"yes"** to any one of the above questions, then the list below might also contain your most awaited outlook needs on the go.

Is that all you are looking for is

- ⤴ Receiving your outlook emails even when you are away from your desktop.
- ⤴ Sending outlook emails with attachments, even while away for a family trip.
- ⤴ Searching for contacts stored in your outlook from anywhere on the globe.
- ⤴ Searching for your most crucial older mail, amidst a business lunch.

Your time is valuable, so why put gaps in your efficiency by missing out the most crucial rrs attachments stored in your inbox. Make outlook access as easy as breeze.

The Solution

Looking for a way to use all of the rich Outlook functionality you already know and use, anywhere away from your desktop. The way out of the problem would definitely be an app that puts the entire desktop outlook on to your hand-held device, thus supporting the growing trend of mobile workforce.

Catch your outlook mails even amidst your snooze with [OutlookReflex](#). [OutlookReflex](#) provides the users, considerable flexibility in generating, receiving and managing Outlook emails and the application holds a number of distinct advantages.

A use case

use case 1:

Mr. Wilson the head of marketing department is on a sales trip. He reached the client's place and came to know that the purchasing manager, Nick Brigandi, has left the company, and a new purchasing manager, Andrea Dunker, has been hired. Wilson has already provided the details pertaining the deal to Mr. Nick and so he didn't carry any copies of the details nor his laptop. Now he is put up in a situation to provide the details again to Mr. Andrea Dunker. What would have been done by Wilson?

Solution

<http://www.outlookreflex.com/>

Now let's analyze the way out of the frustrating situation. Only if Wilson could access the purchase details stored in his outlook, he would have closed the deal. But then how is it possible?

What if Wilson had a way to access his desktop outlook emails from his mobile device? Wow, then he could have got the details instantly from his outlook folder and provided it to Andrea. Then what more, the deal would have been made.

Outlook Reflex-the right solution

The most crucial needs of the outlook users, being the [access to outlook contacts](#) and a way to carry the Outlook folders containing their e-mails, rss feeds, attachments etc, thus providing instant access to the stored data are all enabled with [OutlookReflex](#).

The ultimate success of any remote access product hinges on a successful user experience. OutlookReflex provides a secure connection to desktop outlook right from your hand-held.

Use case for OutlookReflex

Mr. James is a chronic outlook user and has the habit of storing all the contacts in his desktop MS outlook. He relies totally on his outlook emails for most of the business communications. He keeps all the attachments in their specific folders and reviews them whenever needed. For example the mails on business contracts and other product details are the most crucial for him, which needs anytime access for making up important decisions. James always puts a lot of things in his mind and thus tends to forget to reply mails. After all, as easy as it is to send someone an email, it's just that easy for both sender and receiver to forget it's there. So, he used to flag the important mails to keep a track of all those little requests (both the ones you send and the ones you receive.) But one great difficulty James faced was that he was missing out his outlook mails frequently because, he was a frequent traveler.

It was to his luck that he found out "OutlookReflex" (the app that puts the desktop outlook on the mobile,) from the App stores. Now with OutlookReflex he is able to flag the outgoing mails to remind the recipient of the important mail and he even sets a reminder to pop up for his recipient, prompting him/her to respond to his email within the dead-line. *He feels great to accomplish all the possible tasks with OutlookReflex on the go.*

Working of OutlookReflex

MS Outlook Folders in the Desktop is shared using Outlook Desktop Application. As the Desktop is connected to the Internet, our Mobile App accesses the entire MS Outlook Mails from the Desktop through Wi-Fi or 3G/4G. OutlookReflex comprises of a Mobile App and a Desktop Application. Mobile App can be downloaded from App store. Registration process is required to get your User-name and Password. A suitable Desktop Application is downloaded from www.outlookreflex.com. After Installing OutlookReflex Desktop Application, Validation process for the registered user needs to be done. Signing up with Mobile App enables you to activate the Mobile Device. Share your MS Outlook Folders from your Desktop Application and stay connected to your MS Outlook on Smartphone and Tablets

<http://www.outlookreflex.com/>

Storage and pricing

The application as such allows the sharing of outlook from your desktop on to your smartphone, and there are no specifications for the size or type of files or documents to be shared. The current pricing is \$9.99/year. The provider offers a free trial period of around 5 days, as most of them want to give a try before getting any application.

Summary

MS Outlook, the most used email application is now made mobile with OutlookReflex. At ease outlook access form hand-held, the most looked for by the crucial outlook users is now made possible with OutlookReflex.
